

PRESENTATION

IPL Data Analysis Project Using SQL & Power BI

Presented by
SAMBU AKSHARA

PROJECT OBJECTIVE

The objective of this project is to analyze IPL match and ball-by-ball data to uncover meaningful insights related to:

- Player performance
- Team success trends
- Toss impact on match results
- Venue statistics
- Match strategy analysis

The project demonstrates practical data analytics skills using SQL queries and interactive Power BI dashboards.

PROJECT GOALS

01

- Analyze IPL match and ball-by-ball data using SQL and Power BI.

02

- Identify player, team, and match-winning performance trends.

03

- Create interactive dashboards to generate cricket insights through data visualization.

TOOLS & TECHNOLOGIES USED

1. MySQL Workbench

- Data querying
- Aggregation
- Analysis using SQL

2. Power BI

- Dashboard creation
- Data visualization
- Interactive reporting

3. CSV Dataset

- IPL match-level data
- Ball-by-ball delivery data

4. Kaggle Dataset

- Source of IPL historical records

SQL DATA ANALYSIS

SQL queries were used to extract and analyze important IPL insights.

Analysis Performed:

- Top run scorers
- Top wicket takers
- Team win statistics
- Toss impact analysis
- Venue analysis
- Powerplay scoring trends
- Death overs performance
- Batting first vs chasing trends

Key SQL Operations Used:

- GROUP BY
- ORDER BY
- COUNT()
- SUM()
- WHERE
- Aggregate Functions

The screenshot shows a SQL IDE interface with multiple tabs. The active tab is 'top_batters'. The query editor contains the following SQL code:

```
1  -- Purpose: Find top 10 run scorers in IPL
2  •  USE ipl_analysis;
3  •  SELECT batsman,
4      SUM(batsman_runs) AS total_runs
5  FROM deliveries
6  GROUP BY batsman
7  ORDER BY total_runs DESC
8  LIMIT 10;
```

Below the query editor is the 'Result Grid' showing the top 10 run scorers:

batsman	total_runs
SK Raina	1277
G Gambhir	1271
RG Sharma	1058
MS Dhoni	1008
Yuvraj Singh	891
SE Marsh	880
RV Uthappa	866
S Dhawan	859
YK Pathan	839

IPL OVERVIEW DASHBOARD

The overview dashboard provides high-level IPL insights.

- Visuals Included:
- Top IPL Run Scorers
- Top IPL Wicket Takers
- Most Successful IPL Teams
- Toss Impact Analysis

- Insights:
- Identified consistently performing players
- Compared team success rates

Evaluated toss influence on match outcomes

IPL MATCH STRATEGY ANALYSIS

This dashboard focuses on tactical match analysis.

Visuals Included:

- Powerplay Performance
- Death Overs Performance
- Batting First vs Chasing Trends

Insights:

- Powerplay overs contribute significantly to momentum
- Death overs heavily impact total scores

Chasing trends influence toss decisions and strategies

IPL VENUE INSIGHTS

Venue analysis helps identify the most frequently used IPL grounds.

Insights:

- Certain venues host significantly more matches
- Venue conditions may affect team performance
- Stadium selection influences tournament scheduling

CONCLUSION

This project successfully analyzed IPL data using SQL and Power BI to uncover meaningful cricket insights.

Key Learnings:

- Data extraction using SQL
 - Data aggregation and analysis
 - Dashboard design in Power BI
 - Visual storytelling using charts
 - Sports analytics workflow
- 

This project demonstrates practical skills in:

- SQL
- Data Visualization
- Dashboard Development
- Analytical Thinking
- Business Intelligence

The image features a light gray background with decorative wavy lines in the corners. The top-left and bottom-right corners have thick, dark gray wavy lines. The top-right and bottom-left corners have thin, light gray wavy lines. The text "THANK YOU" is centered in a bold, black, serif font.

THANK YOU
